Education

•Jain University, Bengaluru *Expected Graduation: 2028*

Bachelor of Computer Applications (BCA) CGPA: 8.35/10

Personal Projects

•AI-Powered Answer Sheet Evaluation Platform *Personal Project*

Python | Flask | Supabase | OpenRouter API | Qwen3-VL-32B-Instruct | Render Live Demo | GitHub

- Developed and deployed a full-stack AI evaluation platform that accepts question papers and handwritten answer sheets in PDF, JPG, and PNG formats and automatically evaluates responses using a multimodal vision-language model through the OpenRouter API.
- Built the complete application stack including frontend, Flask backend, Supabase database integration, file processing, evaluation workflows, automated feedback generation, user authentication, and deployment on Render.
- Implemented structured evaluation and report generation to provide AI-generated assessment results and personalized feedback based on submitted answers and corresponding questions.

•AI Fitness Coach *Team Project*

Python | Flask | Supabase | Gemini API | Git Live Demo

- Developed a full-stack AI fitness coaching platform that generates personalized workout and diet plans, answers fitness-related questions, and enables users to track their fitness progress.
- Contributed across frontend and backend development, integrating the Gemini API for AI-powered recommendations and Supabase for database management and user authentication.
- Implemented application functionality, user workflows, and deployment while collaborating with the team through Git-based version control.

•Cura – Voice-First 3D AI Companion *Agentrix 2026*

Next.js | TypeScript | OpenRouter | Groq Whisper | ElevenLabs | Supabase GitHub

- Built a voice-first AI companion featuring an interactive 3D avatar that listens to users, processes conversations, and responds through synchronized speech, avatar animation, and lip-sync.
- Implemented a real-time voice pipeline using Groq Whisper for speech-to-text, OpenRouter for AI responses, and ElevenLabs for text-to-speech with timing data for avatar lip-sync.
- Integrated crisis-safety handling that screens user messages and routes high-risk conversations to predefined safety responses instead of generating model-based replies, along with Supabase-backed journaling.

Technical Skills and Interests

Languages: JavaScript, Python, Java, C, HTML5, CSS3

Frontend & Backend: Flask, REST APIs, Responsive Web Design

Databases & Deployment: Supabase, Render, Git, GitHub

AI & Tools: Gemini API, OpenRouter API, VS Code, WSL

Core Concepts: Data Structures, Object-Oriented Programming, API Integration, Version Control, Full Stack Development

Areas of Interest: Full Stack Development, Artificial Intelligence, Cybersecurity, Software Engineering

Hackathons & CTFs

•DecipherX – 24-Hour CTF *Cybersecurity*

- Secured **3rd position** among participating teams in a 24-hour Capture the Flag competition, solving cybersecurity challenges under time constraints.

•Agentrix 2026 – National AI Hackathon *AI / Hackathon*

- Built **Cura**, a voice-first 3D avatar AI companion featuring conversational AI, voice interaction, synchronized avatar responses, and crisis-safety handling.

•Odoo Hackathon *Full Stack Development*

- Developed **DayFlow HRMS**, an HR management system using **Next.js** and **Prisma**, as part of the Odoo Hackathon.
